Configure high availability and scalability for your applications

Create highly-available and scalable applications in minutes by using built-in load balancing for cloud services and virtual machines. Azure Load Balancer supports TCP/UDP-based protocols and protocols used for real-time voice and video messaging applications. Learn more

Balance IPv4 and IPv6 addresses Build highly reliable applications Secure your networks

Native dual-stack endpoints help meet regulatory requirements and address the fast growing number of IPv6 users. Load Balancer improves application uptime by automatically failover to healthy endpoints. Control network traffic and protect private networks using built-in protocols like SSL/TLS, QoS, and QoS.

ENG IN 14:13 21-09-2024

The screenshot shows the Microsoft Azure Storage browser interface for a storage account named 'mmgan'. On the left, a navigation sidebar lists various Azure services like Overview, Activity log, and Storage browser. The Storage browser section is expanded, showing Blob containers, File shares, Queues, and Tables. Under Tables, there is a single entry named 'rahul'. The main pane displays the contents of the 'rahul' table, which has four columns: PartitionKey, RowKey, Timestamp, name, city, and place. There is one item listed: a timestamped row with PartitionKey and RowKey both empty, name 'dhoni', city 'ranchi', and place 'bihar'. The status bar at the bottom indicates the date as 21-09-2024 and the time as 14:13.
